DESCRIPTION

M|MBR maintains an ongoing partnership with a regional engineering and operations firm, serving as a distributor and technical resource across multiple MBR projects.

For this application, M|MBR specified and supplied a membrane solution that was backward compatible with existing equipment. The new product has a wider operating range than the older product and is designed for seamless installation. No changes to ancillary equipment were required. It was a part-for-part replacement.

This simple aftermarket project created a second qualified source for the owner, supporting cost-effective and reliable operation for the life of the plant.

About the M|MBR team

As an experienced - and engagingly impartial and self-effacing - practitioner in the field of MBR technology, Dennis seems to know heaps more about the subject than most of the senior academics I've met over the course of the past 25 years.

Simon Judd

2026 PROJECT OVERVIEW

Project Category : Aftermarket

Project Type : Membrane Products (Part-for-Part)

Scope : Equipment Only

Previous Membrane : ZeeWeed (Hollow Fiber, Polymeric)

Installed Membrane : Supratec (Hollow Fiber, Polymeric)

The Universal MBR Hub

Your single partner for all your MBR needs at every stage of your system's life.
