Project History :

Greenfield, Membrane Replacement

Wastewater Type(s) :

Municipal

Application(s) :

Tribal, Casino

Discharge Type(s) :

Reuse + Discharge

DESCRIPTION

Santa Ana WWTP is a 0.50 MGD tribal casino facility in New Mexico that M|MBR staff helped deliver in 2017.

As the BIO-CEL L-2 membranes approached end of service life, we supplied backward-compatible BIO-CEL L+ modules as a drop-in replacement.

Installed in just three days, the upgrade restored capacity, improved fouling resistance, extended membrane life, and reduced cleaning frequency, without new cassette structures, civil work, or major downtime.

”

I want to share some wonderful news about the WWTP. We at Santa Ana Pueblo want to pass these compliments on to you and would like to thank you and MMBR Systems for the ongoing technical support and the great results.

Orlando Medina, Santa Ana, NM

2022 PROJECT OVERVIEW

Project Category : Aftermarket

Project Type : Membrane Products (Part-for-Part)

Scope : Turnkey

Previous Membrane : BIO-CEL L-2 (Flat Sheet, Polymeric)

Installed Membrane : BIO-CEL L+ (Flat Sheet, Polymeric)
