

INSTALL TIME

17 HRS

HIGHLIGHTS

Project History :

Greenfield (2007), Parts Supply (2025)

Wastewater Type(s) :

Municipal

Application(s) :

Residential

Discharge Type(s) :

Discharge

DESCRIPTION

Stony Point WWTP, one of Texas's first packaged MBR plants, was originally delivered in 2007 with M|MBR team support and later converted to flexible flat-sheet membranes.

In 2025, after approximately 18 years of plant operation, the modules reached end of service earlier than planned. M|MBR responded within days with backward-compatible replacement equipment from local inventory.

Technicians worked with plant operators to complete a four-module changeout in 17 hours during a rain event.

The plant quickly returned to design performance, with improved operability and reliability.

”

The MMBR team delivered 4 new membrane units in less than a week and helped to get them installed in 17-hrs. It was an emergency and the MMBR team was there with us to get the plant back online. After the replacement, plant capacity was fully restored and performance improved.

James Elam, Operations Area
Manager

2025 PROJECT OVERVIEW

Project Category : Aftermarket

Project Type : Membrane Products (Part-for-Part)

Scope : Turnkey

Previous Membrane : BIO-CEL 480 (Flat Sheet, Polymeric)

Installed Membrane : BIO-CEL L+ (Flat Sheet, Polymeric)

The Universal MBR Hub

Your single partner for all your MBR needs at every stage of your system's life.
